

Garage for emergency vehicles.

Modular garage space for fire and rescue services.

No space in the station? We have the solution.

New fire trucks, additional equipment, limited garage space — many fire and rescue units face a shortage of space in the station today. Extending a building is often a long process involving high costs and formalities.

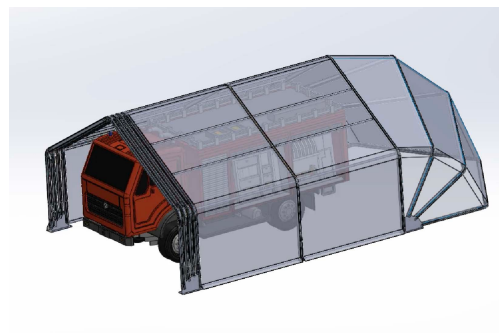

Additional garage space.

FDomes Defence garage tents are a practical, proven solution for fire service units that need immediate protection for vehicles, equipment or operational facilities.

- No foundations.
- No months of waiting.
- No costly extension to the station.

What does a unit gain?

- 1 Year-round vehicle protection**
Effective shelter from rain, snow, wind and UV radiation.
- 2 Ready space within hours**
Rapid assembly increases garage space almost immediately.
- 3 Fewer formalities**
A solution requiring no conventional construction or costly earthworks.
- 4 Flexibility of use**
The structure can be relocated, extended or adapted to the unit's changing needs.
- 5 Lower cost than extending the station**
Functional garage space without investing in a traditional building.

FDomes Defence provides modular solutions for emergency services and rescue units — from garage and storage space to operational facilities and structures supporting civil protection. We offer rapid assembly, flexible configuration, manufacturing in Poland and full after-sales support, including servicing, maintenance and membrane cleaning. As a result, a unit receives not just additional space, but a complete solution ready to operate when it is needed most.
